

The Forcible Entry Training Trailer – This trailer is used by firefighters to practice gaining entry through doors, windows, gates, and locking mechanisms. It has a forcible entry door simulator that firefighters have to break through. It also has a cutting station that simulates different obstacles that firefighters may find during a fire or rescue situation. Also, a station that trains firefighters to get through locked doors while causing minimal damage to property will be demonstrated. We use electric tools that are quiet and produce no fumes which allows our County Firefighters to train indoors during bad weather. These trailers are used through an outreach program. Our Erie County fire departments sign up, and then we send the County Fire Instructors and the trailers to their respective fire stations throughout the year.
