

The Engine Company OPs Training Trailer – This trailer is used by firefighters to practice the use of FDC connections and the use of commercial sprinkler systems. Both the FDC and sprinkler systems on this trailer are working, hands on, functional systems. The firefighter students will do actual water hookups to learn how these systems can aid in mitigating structure fires. The trailer also contains a “Nozzle Forward” prop that will allow instructors to teach hose line advancement through corridors and stairwells. These trailers are provided through our outreach program. Erie County fire departments sign up, and then we send the County Fire Instructors and the trailers to their respective fire stations throughout the year.
