## Terms to use, terms to avoid, and why

### Talking About Yourself or Others with Substance Use Disorder (SUD)

- SUD is a chronic brain disease.
- Use person-first language to show that SUD is an illness and the person with SUD “has” an illness, rather than “is” the problem/illness.
- Suggested terms avoid negative associations, punitive attitudes, and individual blame.
- Use medically accurate terminology as we would for other medical conditions.
- Stigmatizing language may decrease a person’s sense of hope and self-efficacy for change.

### Talking About Using Substances

- “Habit” implies that a person is choosing to use substances or can choose to stop; this is inaccurate.
- Describing SUD as a habit makes the illness seem less serious than it is.
- The term “abuse” was found to have a high association with negative judgments and punishment.

Say ...	Instead of ...
<ul style="list-style-type: none"> <li>• Person with a substance use disorder               <ul style="list-style-type: none"> <li>◦ Person with opioid use disorder (OUD)</li> <li>◦ Person with alcohol use disorder</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Addict</li> <li>• User</li> <li>• Substance/drug abuser</li> <li>• Junkie</li> </ul>
<ul style="list-style-type: none"> <li>• Person with alcohol use disorder</li> </ul>	<ul style="list-style-type: none"> <li>• Alcoholic</li> <li>• Drunk</li> </ul>
<ul style="list-style-type: none"> <li>• Person in recovery               <ul style="list-style-type: none"> <li>◦ Person who previously used drugs</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Former addict</li> <li>• Reformed addict</li> </ul>
<ul style="list-style-type: none"> <li>• Testing positive (on a drug screen)</li> </ul>	<ul style="list-style-type: none"> <li>• Dirty</li> <li>• Failing a drug test</li> </ul>
<ul style="list-style-type: none"> <li>• Being in recovery or remission</li> </ul>	<ul style="list-style-type: none"> <li>• Clean</li> </ul>
<ul style="list-style-type: none"> <li>• Newborn exposed to substances               <ul style="list-style-type: none"> <li>◦ Baby with neonatal abstinence syndrome</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Addicted baby</li> </ul>

Say ...	Instead of ...
<ul style="list-style-type: none"> <li>• Substance use disorder (SUD)               <ul style="list-style-type: none"> <li>◦ Opioid use disorder (oud)</li> <li>◦ Alcohol use disorder</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Habit</li> <li>• Addiction</li> </ul>
<ul style="list-style-type: none"> <li>• Use exceeding prescriber guidelines</li> </ul>	<ul style="list-style-type: none"> <li>• Abuse</li> </ul>
<ul style="list-style-type: none"> <li>• Use</li> </ul>	<ul style="list-style-type: none"> <li>• Misuse or overuse</li> </ul>
<ul style="list-style-type: none"> <li>• Medication Supported Recovery (MSR)               <ul style="list-style-type: none"> <li>◦ Medication for opioid use disorder or a substance use disorder</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Opioid substitution</li> <li>• Replacement therapy</li> </ul>
<ul style="list-style-type: none"> <li>• Medication for Opioid Use Disorder (MOUD)</li> </ul>	<ul style="list-style-type: none"> <li>• Substituting one drug for another</li> </ul>

It is a common myth that medications “substitute” one drug or “one addiction” for another. Medications help manage withdrawal symptoms, reduce cravings, and help individuals achieve and maintain recovery.
